DCO

dco.uab.cat

Data Compression Observatory

Adherence form

Principles

The DCO is a network of researchers, research groups and other entities related to data compression. Its long-term aims are a curated tracking of the state of the art, avoiding the repetition of negative results, the observation and promotion of the standards in use, and a common evaluation framework with homogeneous data and comparisons.

The DCO is open to the whole community: to any researcher, group or entity related to data compression, with no requirement beyond sharing these principles.

A fuller description is available at dco.uab.cat.

Adherence

Being part of the DCO costs nothing, demands no exclusivity, requires no minimum commitment of time and does not bind each member's institution.

Whoever joins shares these principles, treats material shared within the network on a non-public basis with discretion, neither acts nor speaks in the name of the DCO without the consensus of its members, and abides by the decisions the network takes by consensus.

You can send your signed adherence forms to miguel.hernandez@uab.cat.
